# SUPPORT- & SADDLE CHAIRS

WORK CHAIRS FOR ALL ENVIRONMENTS

## Work chairs for those in the know

---

Our collection of saddle and support chairs is ideal for those who understand the importance of alternating between sitting and standing at their workstation.

With our chairs, you sit higher than on a standard office chair and thus further increase the angle of the hip. This gives you a better working position, which will have a positive impact on your breathing and blood circulation.

Wesjon has an extensive background in the manufacture and marketing of work chairs for all possible working situations and environments.

Regardless of whether you prefer to sit on a saddle chair or on one of the more traditional support chairs, we have a model that will suit you and your tasks perfectly.

We have chosen to certify our products according to the guidelines of the Swedish scheme, Möbelfakta. Aside from environmental and quality requirements, corporate social responsibility is also included in this, which guarantees that our products are manufactured under the correct conditions.

Melby

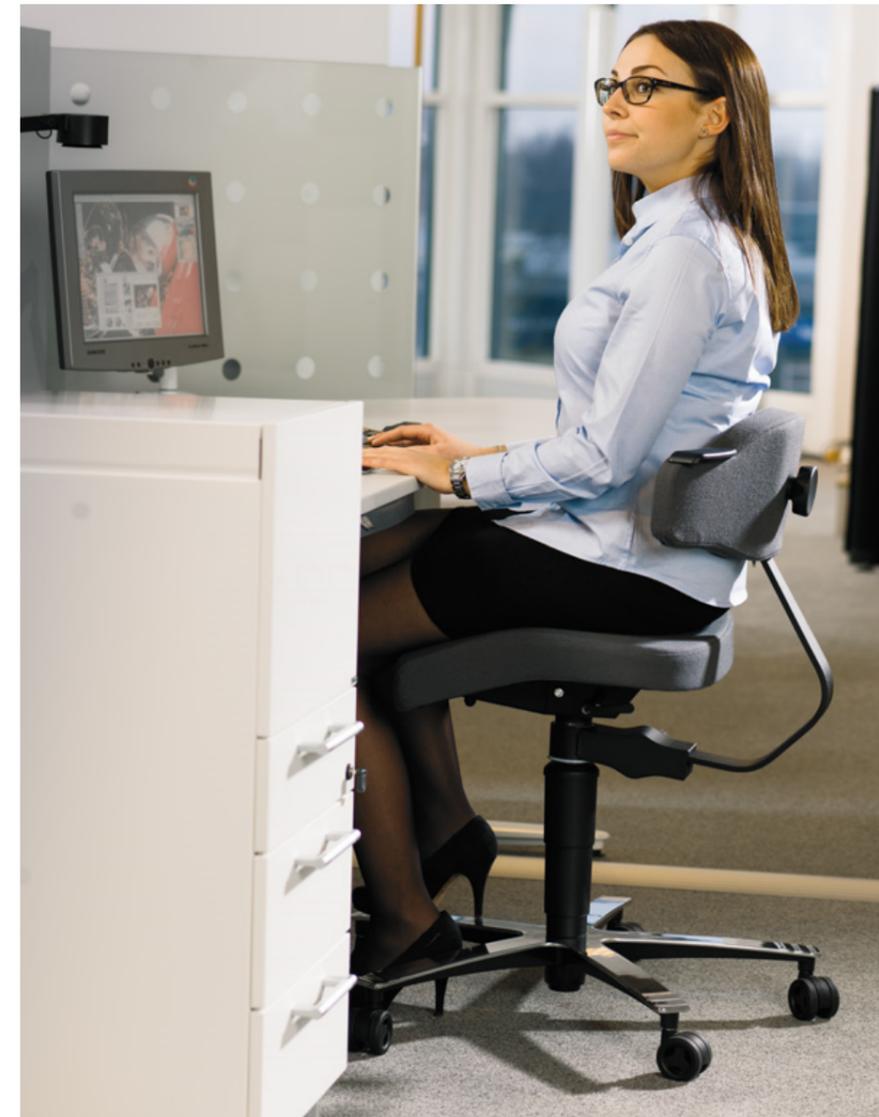

Sola

Melby and Sola saddle chairs encourage and make it easy to alternate between sitting and standing at your workstation.

The series has been developed with tomorrow's workplaces in mind and works perfectly with height-adjustable desks. It is natural and easy to find the correct seating position for each moment, providing greater flexibility during your working day.

The seat has integrated areas that are designed to relieve pressure and provide you with greater comfort.

The backrest of the Sola can be rotated 360° around the seat and can be used as a side rest or underarm rest, for example.

## Creative working environments

The Sola and borgholm saddle chairs are the work chairs that encourage plenty of options for variety, which leads to an increased enjoyment of working, wellbeing and efficiency.

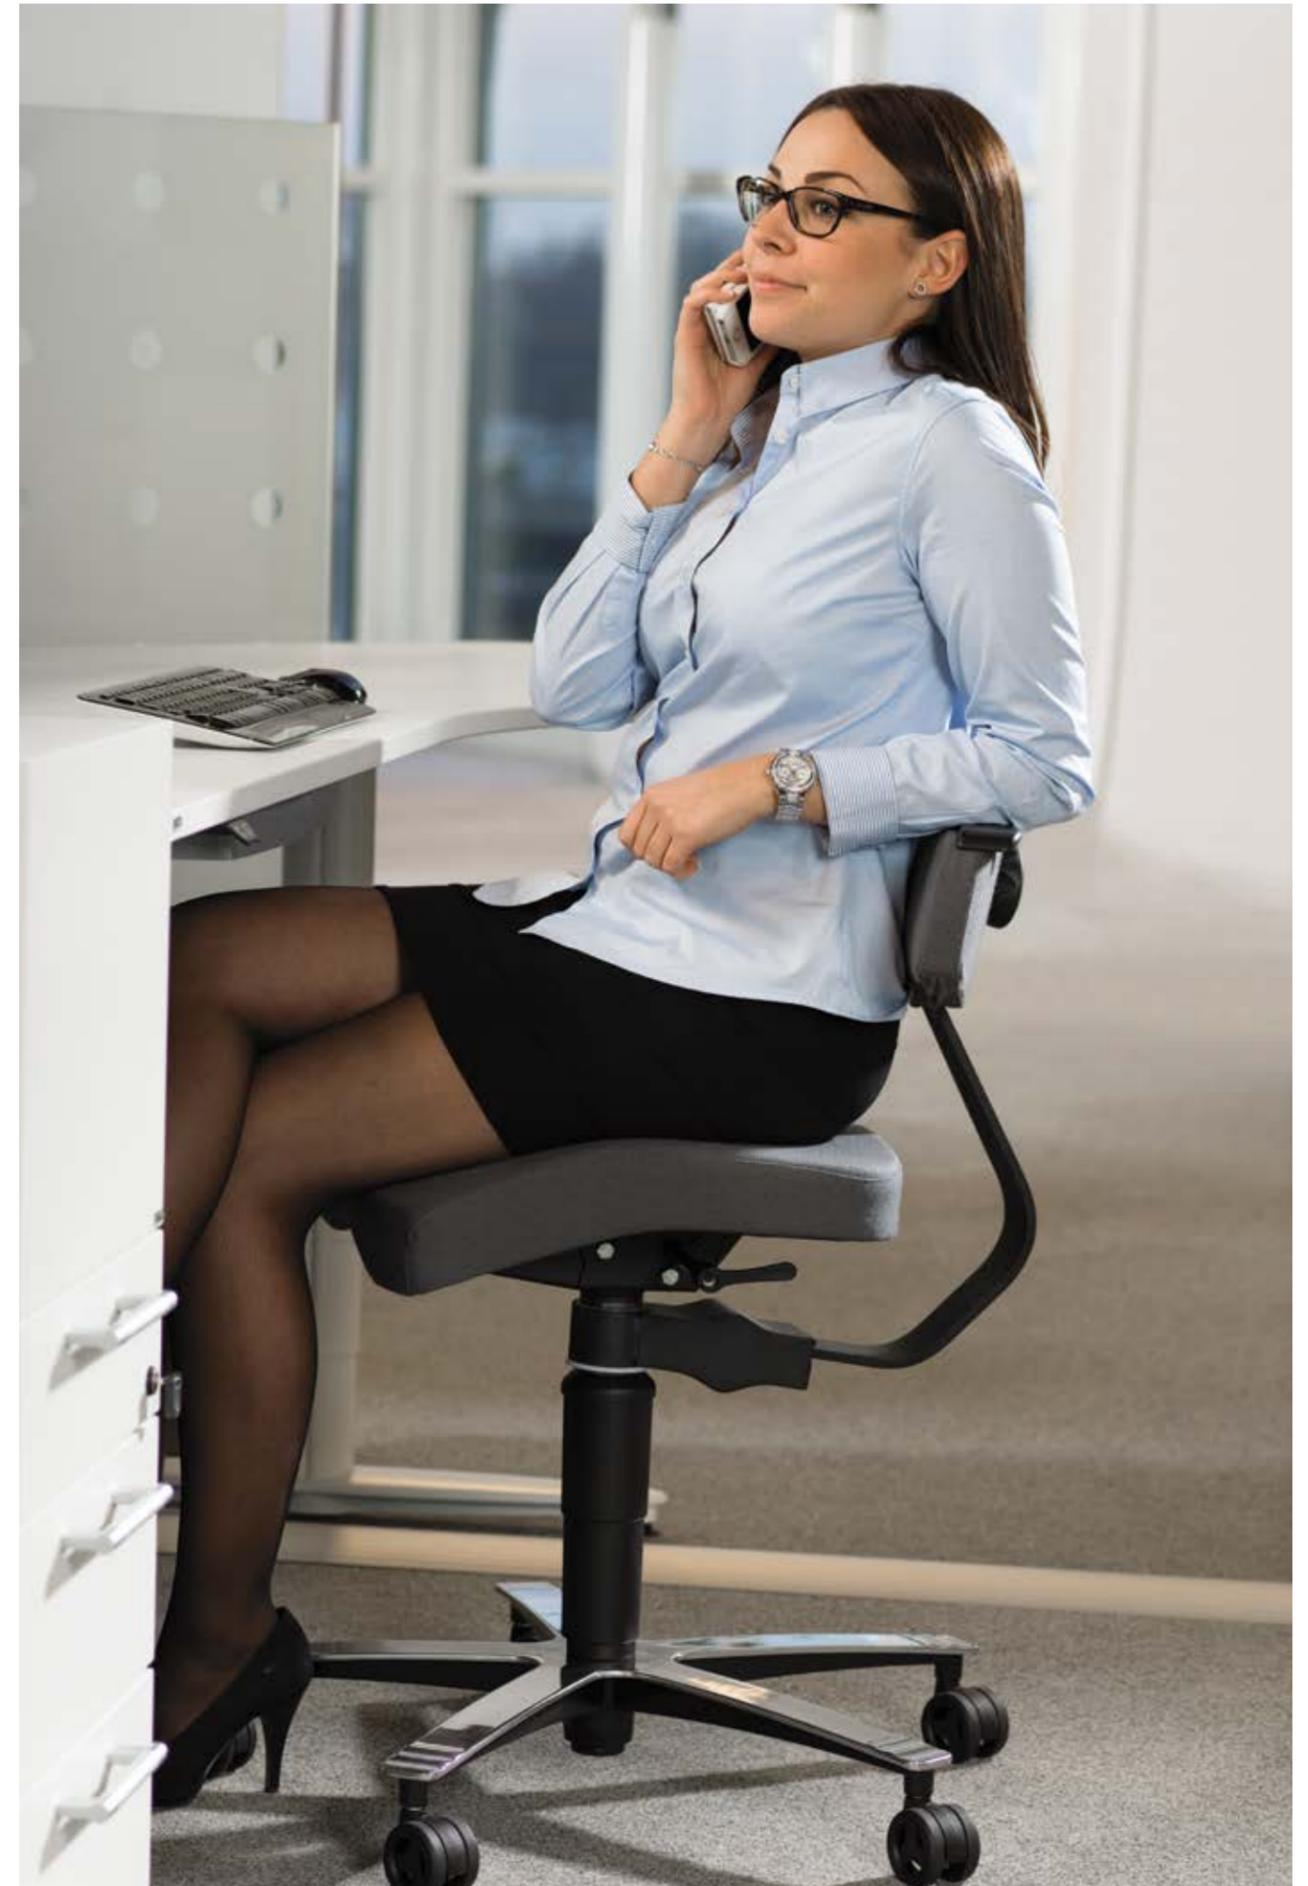

## borgholm

---

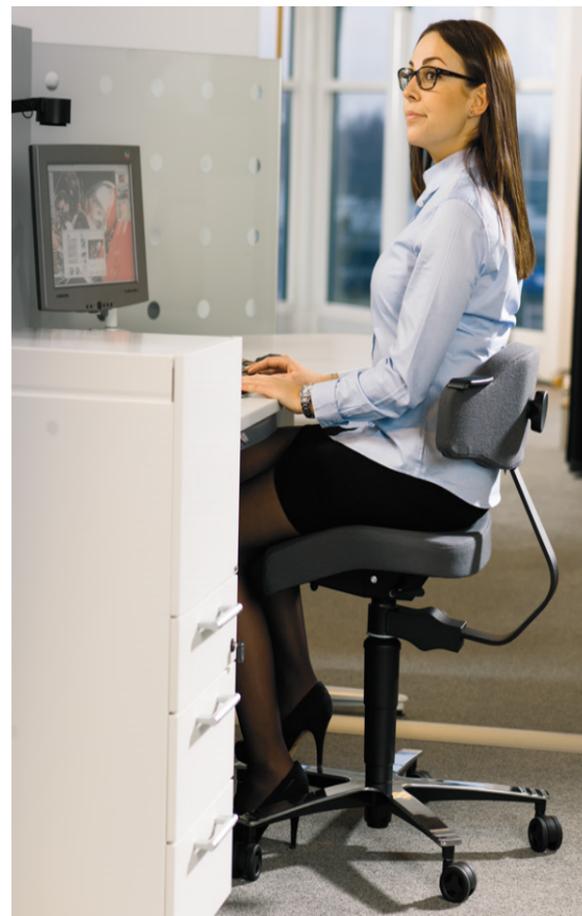

While developing the SOLA saddle chair, we recognised the need for a traditional seat that allows for slightly higher seating. Therefore, we developed the borgholm, which has a seat with a front edge that is angled downwards.

The result was a very flexible office chair with several possibilities for changing positions. The backrest can be rotated 360° around the seat and can be used as a side rest or an underarm rest, for example.

# A modern office chair has an infinite number of favourite positions!

It is easy to get stuck in a static working position. We know that the body benefits from movement and variation, which is why our work chairs have been designed to encourage flexible seating arrangements.

# Creative meeting places

We think that a dynamic meeting place promotes both efficiency and creativity.
