Collaboration

HOCKEY structures collaborative areas within the open space and combines media integration, storage, and acoustics into one architectural element.

Screen mounts, whiteboards, pinable panels, integrated greenery and representative storage create a multifunctional hub for communication and collaboration.

The sculptural timber construction gives the media wall a warm and distinctive presence within the space.

Reception

HOCKEY reinterprets the reception area as a combination of wardrobe, seating, and storage.

Open shelving, integrated storage, seating and warm materials create an inviting atmosphere with a high level of functionality.

The modular system enables individual solutions for modern reception and waiting areas.

Meeting x Work Café

HOCKEY creates communicative meeting points for spontaneous conversations, short meetings, and breaks throughout the workday.

The combination of standing meetings, café station, and spatial structuring opens up new possibilities for modern communication and lounge areas.

The warm materiality of the timber construction creates an inviting and open atmosphere.

Acoustics x Greenery

HOCKEY creates structured workspaces with integrated acoustics and greenery.

Pinable panels, natural materials, and the characteristic timber construction create a calm and warm spatial atmosphere within the open space.

The combination of functionality and sculptural design turns HOCKEY into an architectural element for modern working environments.

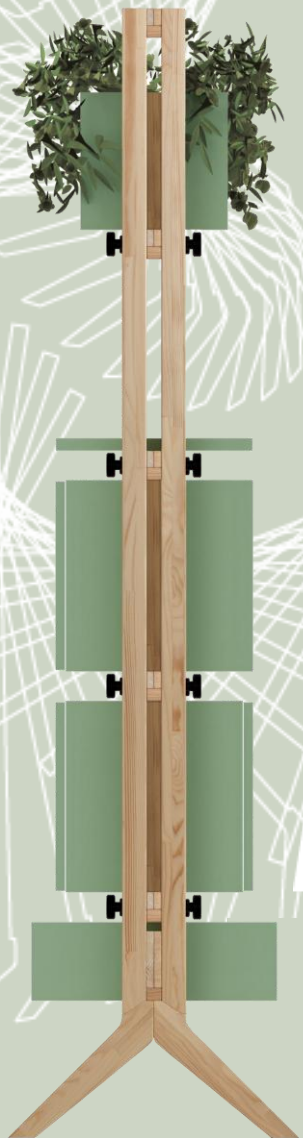

Lockers x Greenery

HOCKEY combines privacy screening, personal storage, and integrated greenery into an architectural element within the open space.

Integrated lockers structure the space and support flexible workflows.

The combination of Blue Shadow and black-stained glulam spruce gives the system a distinctive presence — particularly within revitalized industrial architectures.
